MOBILE APPS DEVELOPMENT

Business Process Outsourcing

Business process outsourcing (BPO) is the delegation of one or more IT-intensive business processes to an external provider that, in turn, owns, administrates and manages the selected processes based on defined and measurable performance metrics.

Broadly speaking, companies adopt BPO practices in the two main areas of back-office and front-office operations. Back office BPO refers to a company contracting its core business support operations such as accounting, payment processing, IT services, human resources, regulatory compliance, and quality assurance to outside professionals who ensure the business runs smoothly.

IT Staffing & Sourcing

The IT staffing process is referred to as a systematic implementation process of the human resources plan, which involves finding or attracting candidates, evaluation, selection, recruitment and appraisal.

We are an unconventional technical staffing agency and our partnership model focuses on your unique needs- supporting short-term, seasonal or temporary IT staffing agencies requirements, providing contract-to-hire talent for project-based support with the option to hire the contractors as permanent employees, or finding the permanent top talent your company needs today. Our IT staffing services cover Contract Staffing with onsite, offsite, and offshore (IT staff outsourcing) services.

Recruitment Process Outsourcing

We are recognized as the global leaders in the enterprise-wide recruiting and outsourcing solutions. We offer end-to-end outsourcing, Employment Agency, and the best RPO services to help our clients to hire the best talent without any hassles.

We offer the best-in-class services to scrap the most accurate data and CVs from the different networking sites, from the World Wide Web and Job Boards using our technical expertise

Custom Software Development

Custom software development is the process of designing, creating, deploying and maintaining software for a specific set of users, functions or organizations. In contrast to commercial off-the-shelf software (COTS), custom software development aims at a narrowly defined set of requirements.

The advantages of custom software engineering are enough to deliver value for businesses that choose to build custom tools. With a tailored approach, you can address unique goals and needs, build workflows, and organize processes based on the specific requirements of your company.

MOBILE APP DEVELOPMENT

Application development is the process of creating a computer program or a set of programs to perform the different tasks that a business requires. From calculating monthly expenses to scheduling sales reports, applications help businesses automate processes and increase efficiency.

Application developers write software programs for use across mobile operating systems, including Apple, Android, and Windows devices. Once applications are created, application developers are also responsible for testing the application and providing updates whenever necessary.

Digital Marketing

Digital Marketing is the process of promoting and selling products or services through advertising, promotions, and other methods. It involves researching, promoting, and distributing a product or service to a target market.

The goal of marketing is to increase demand for a product or service and ultimately drive sales. Effective marketing strategies can help a business to reach its target audience, build brand awareness, and establish a strong reputation in the market. Common marketing channels include social media, email, search engines, influencer marketing, events, and traditional media such as television, print, and radio.

The screenshot displays the 'NAVAL PAY OFFICE' website interface. The header includes the organization's name, a logo, and social media icons. A navigation menu contains 'HOME', 'ABOUT US', 'INDIVIDUAL LOGIN', 'SHIP/ UNIT LOGIN', and 'USER GUIDE'. The 'INDIVIDUAL LOGIN' page features a 'User Login' form with the following fields: 'PNO WITH SUFFIX', 'PASSWORD', and a CAPTCHA field with the characters 'S 9 / N L 3'. Below the CAPTCHA is a text prompt: 'Enter the characters shown in the image.' There are also links for 'Forgot Password?' and 'Sign Up'. At the bottom of the form are 'Login' and 'Reset' buttons. A watermark for 'Activate Windows' is visible in the bottom right corner of the screenshot.
